INSPIRED SECURITY WITH GALLAGHER

Protecting people, places, and assets is at the core of what Gallagher does. Through the design and manufacture of intuitive, intelligent security systems, the global technology company works with architects, engineers, and consultants to design solutions that meet the unique requirements of customers all over the world.

Gallagher's security solutions include access control, intruder alarms, perimeter security, and business policy execution. With an office in Victoria and a team across Australia, Gallagher works in collaboration with their customers to design a scalable solution that will protect them now, and into the future.

"From basic access control through to the highest security requirements, we provide custom solutions to meet the individual specifications of new builds and large scale construction projects," says Scott Johnstone, National Sales Manager, Australia and Papua New Guinea at Gallagher.

In today's rapidly changing, technology driven world, Gallagher is continually developing innovative solutions that allow customers to stay ahead of the game. Through their utilisation of the latest technologies, Gallagher helps keep businesses safe.

One such innovation is Gallagher's Command Centre software platform, which gives customers complete control and visibility of their site. With seamless integration to cameras, elevators, turnstiles, biometrics and more, Gallagher's Command Centre is a powerful tool that provides critical site management. This fully customisable software allows customers to configure, view, manage, and report on all aspects of their security system at any time, from anywhere.

"Our solutions deliver so much more than security," says Scott. "Through automation and integration, we can create efficiencies and save resources in a way that has a very real impact on a company's bottom line."

iGuard AUSTRALIA

iGUARD AUSTRALIA: SPECIALISTS IN CONSTRUCTION SERVICES

iGuard Australia Pty Ltd is a leading provider of security services in New South Wales and specialises in security for the construction industry. The Management at iGuard have an extensive background in providing site security services to the building sector; totalling a combined 50 years experience and over 2,000 successfully secured projects between them, their experience in this field is unrivalled.

iGuard prides themselves on ensuring their clients are serviced with the most up to date technologies, which deliver superior security and cost efficiency. They provide quality assured services with professional support through their 24-hour call centre.

The management team at iGuard were involved in the provision of security services to the following major infrastructure projects: Westlink M7, Cross City Tunnel, Lane Cove Tunnel, Southern Sydney Freight Link, Inner West Light Rail, Bangor Bypass, Lawrence Hargraves Drive and Kingsgrove to Revesby Rail Quadruplication.

iGuard offers traditional manpower services including static guard, patrols and responses and state-of-the-art videofied CCTV systems and alarms, reducing the potential for theft and vandalism, keep valuable fitout items, tools, copper and equipment secure!

All static guard and patrol services performed by iGuard are fully verifiable by way of electronic Logger Reports; daily reports are emailed to clients detailing when and where the security operatives have patrolled during the shift the night prior. This ensures that iGuard clients are assured that services are being carried out as per their requirements and expectations.

iGuard has management systems in place that are fully accredited by SAI Global for Quality (ISO 9001:2015), Safety (ISO 45001:2018) and Environmental Sustainability (ISO 14001:2015).

The highly experienced management team and professional security personnel employed by iGuard makes it an easy choice for customers to utilise their services time and time again. For security services that are quality assured, verified, cost effective and reliable, you need look no further than iGuard Australia Pty Ltd.

BE EVVA SECURE

Keeping buildings, intellectual property and people secure is a priority issue in the 21st century. Davcor Group is a leading security specialist, designing, marketing and wholesaling their innovative locks, associated hardware and access control systems.

One of Davcor's seven divisions, markets and distributes the EVVA 4KS maximum security master key system. The 4KS system harnesses billions of combinations to provide maximum intrusion resistance and flexibility. Patented protected until 2035, this premium master key system is ideally suited to situations where a substantial number of high security locks are required, examples being government departments, universities, large schools or significant commercial businesses.

Geoff Plummer, Executive Business Manager, said that the EVVA 4KS system is accredited by the Federal Government's Security Construction and Equipment Committee (SCEC approved includes SL3 rated products) and the equivalent body in New Zealand. "Davcor (EVVA) tightly regulates the distribution of the 4KS system. Only a select group of locksmith companies are accredited to be dealers and must meet the strict dealership appointment criteria."

The key blanks are made from high-grade nickel silver and are virtually unbreakable, showing little wear over time. Unlike most master key systems that rely on spring pressure in the cylinder, the 4KS sliders (locking pins) inside the cylinder are actively moved by the tracks in the key. A total of 12 springless, solid sliders are brought into a specific position via positive control of the six key curves and scanned by two control bars. The 4KS key is scanned a total of four times which is three times more than with conventional pin systems. The lock is only released when the key is fully inserted, and all 12 sliders are in place.

The distinctive springless design also makes the 4KS system highly suitable for dirty and salty environments like ports, mines and councils in coastal areas.

For more information contact EVVA at the Davcor Group, 14 John Hines Avenue, Minchinbury NSW 2770, phone 1300 003 882, email sales@evva.com.au, website www.evva.com.au

HIGH-END SECURITY SOLUTIONS

Complexity under control

Saab Australia

Saab Australia's OneView™ physical security information management system protects some of Australia's most complex institutions and infrastructure—from hospitals to prisons. Manage and streamline all security operations from one easy view. With OneView, you're just one click away from the action. Developed and supported in Australia by a company you can trust. Ask us how we can easily tailor OneView to suit your facilities' unique needs or integrate your current security sub-systems (CCTV, access control, intercoms, etc.) Call to book an obligation-free demonstration // 02 6267 0200

CALL IN THE PALACE GUARD

When it comes to the latest in security technology and professionalism, Castle Security is an industry leader servicing business, government and residential requirements.

Starting operations in Perth 30 years ago, Castle Security are a proud family owned business who have recently expanded their services to include other Australian states and Territories. The company specialises in business security systems, CCTV systems and an expanding range of other security solutions, with a mission to bring the latest technology from around the globe to Australia.

Managing Director, Louis Thorp said that Castle Security provides a comprehensive range of security services including CCTV, alarm systems, access control, intercoms, 24 hour monitoring, electric fencing, fire alarm maintenance and nurse call systems. Castle Security also provides an estimating service for electrical contractors and builders who require detailed and specialised advice on security systems.

Louis believes that in the area of CCTV, 'the cloud' is the way of the future. CCTV cloud storage is revolutionising the industry with exciting innovations that make security systems more secure, more accessible and easier to use. Importantly, cloud CCTV storage removes the risk of accidentally erasing security footage or losing surveillance video to theft. "We can upgrade existing CCTV systems to cloud storage or hybrid NVR storage, removing the need to purchase a brand new system," Louis added.

Castle Security also provides comprehensive access control systems, providing true control over who can gain access to premises. "We can customise a system to suit any business or home," Louis said. "Castle Security is a credited Gallagher Partner allowing us to be at the forefront of high tech security. We can offer the very latest in access control and commercial security systems with the Gallagher Controller 6000 product."

Continually seeking new technology and products for their clients, Castle Security is committed to delivering seamless electronic security and automated technology solutions for both the Commercial, Government and Health Sectors.

For more information contact Castle Security Pty Ltd, phone 08 9303 9244, email accounts@castlesecurity.com.au, website www.castlesecurity.com.au

Why is face recognition technology a game changer for building security?

With the ubiquity of high-definition CCTV surveillance as a given for construction deployments, it's increasingly important to augment your security investments with the capability to accurately recognise people.

Cognitec has been providing market-leading face recognition products to commercial and government clients worldwide for almost 20 years.

This is all we do, so we have to do it well.

The software originates in Germany; is leading-edge, robust and mature; and is supported in Australia via our office in Darling Harbour, Sydney. We work with Commonwealth and State government customers throughout Australia, along with stadiums, airports and smart city constructions.

Face recognition provides security system integrators and end-customers with many benefits, including:

- **instant detection, tracking and recognition of persons on watch lists,** as a pro-active measure to prevent security threats
- **detection of persons banned from premises,** like disgruntled former employees or illegal workers
- **face matching as a second factor of authentication** to detect RFID card swaps or the use of lost cards
- **enhanced surveillance at public venues,** such as stadiums, arenas, and entertainment centres
- **entry/exit recording, and restricted area monitoring,** in conjunction with building access control and video management systems
- **detection of intruders** who are not allowed in a particular location, such as non-residents and unauthorised employees/contractors

Cognitec uses state-of-the-art machine learning techniques to achieve continuous advancement of our face matching algorithms, has won customer value leadership awards, and shows highly accurate results in recent independent government tests.

As you design your next projects, ask us about how to enhance and future-proof their safety and security by incorporating face recognition solutions from Cognitec.
